HMA Group is one of the largest manufacturer and exporter of Frozen Boneless Buffalo meat, Seafood, Pet Food, Rice, and Finished leather from India and Recognized as Star Export house in this Segment by the Government of India. It's our Generation created business having experience of more than 6 decades in this field. HMA Group has its presence in 5 Indian states e.g., Uttar Pradesh, Punjab, Haryana, Rajasthan and Maharashtra with 8 facilities .

HMA Group has installed state-of-the-art, world-class Rendering Plants integrated with each of our modern abattoirs and meat processing complexes. We dedicatedly produce high quality commercially Sterilized Poultry Feed Supplement, Rendered Animal Fat (Inedible Tallow) & Blood Meal utilizing fresh raw materials derived from our HACCP, GMP and ISO Compliant facilities procuring healthy livestock fit for human consumption.

STERILIZED POULTRY FEED SUPPLEMENT:

Poultry feed supplement is an excellent source of Protein, Calcium, Phosphorus and various other minerals essential for Poultry health and growth. The composition of PFS typically includes about 43–47% Protein, 33–35% Ash, 8–12% Fat, and 4–7% Moisture. It is primarily used in the formulation of Poultry feed to improve the amino acid profile of the feed. PFS is commonly used in Animal, Poultry, and Fish feeds to provide essential nutrients and improve the nutritional value of the feed.

INEDIBLE RENDERED BUFFALO TALLOW:

HMA Group also specializes in producing inedible rendered buffalo tallow, a valuable byproduct of the meat processing industry. Inedible rendered buffalo tallow finds various industrial applications, including soap and candle manufacturing, lubricants, and biofuels. Our inedible rendered buffalo tallow is processed using advanced techniques and adheres to stringent quality standards. Through our commitment to sustainability, we ensure efficient utilization of every part of the buffalo, minimizing waste and maximizing value. Our inedible rendered buffalo tallow reflects our dedication to innovation and resourcefulness in meeting the diverse needs of industries worldwide.

BLOOD MEAL

Blood meal is a high-protein byproduct obtained by drying and grinding buffalo blood in a rendering plant. It typically contains 80-90% crude protein, ≤10% moisture, ≤2% fat, 3-10% ash, and has a digestibility of ≥85%. The final product is a dark brown to black fine powder, widely used as a protein-rich feed ingredient in poultry, aquaculture, and livestock diets, as well as an organic fertilizer due to its high nitrogen content.
